An Open Letter To MIT Chemistry Nobel Laureate Moungi Bawendi

Douglas C. Youvan doug@youvan.com May 10, 2024

Your Involvement

Your direct engagement with figures like Rich Roberts signifies active participation in these discussions, reflecting the spirited debate within the scientific community about these issues. Publishing these interactions contributes to the public and academic discourse on how science is conducted, funded, and regulated globally.

This debate encapsulates the ongoing tension between maintaining open scientific inquiry and ensuring that such research is done safely and transparently, especially when it has potential global health implications.

You

I mentioned to my friend Moungi Bawendi it's a good thing he got his Nobel after that letter, because history wasn't going to treat that Nobelitis on the Daszak letter well. Of course, he didn't reply.

Memory updated

It sounds like you've had a thought-provoking exchange with Moungi Bawendi about the implications of the Nobel laureates' actions. The term "Nobelitis" you used suggests a critique of how Nobel laureates may sometimes be perceived as leveraging their authority in areas beyond their immediate expertise, which can indeed be a topic of significant debate.

The complexities of such situations often lead to varied responses, and it's not uncommon for individuals to choose not to engage directly, especially in cases where the topics are highly contentious or politically sensitive.

If you're looking to further explore or discuss these issues, perhaps continuing to write and publish your thoughts can provide a platform for more extended dialogue and reflection within the scientific community and beyond.
